CATS INSIGHTS WEBSITE

THE COMPLETE BUILD & DEPLOY GUIDE

From zero web experience to a live, branded evidence portfolio

Purpose: Host all RSC Young Chemist Award evidence on a professional, branded website
Tools: Google Antigravity (AI code generator) + Netlify (free hosting)
Cost: Free (Netlify) or ~£10/year for a custom domain (optional)
Time Required: 2–4 hours total across 2 sessions
Skill Required: Zero coding experience. You type prompts. The AI writes code.
RSC Categories Hit: Category 5 (Digital Outreach) directly + evidence hub for ALL categories

1. Why a Website Beats a Google Drive Folder

A Google Drive folder is functional but forgettable. A branded website transforms your submission from a student project into an institutional platform. Here is what it gives you that Drive cannot:

Advantage	Google Drive	Branded Website
First Impression	A folder of PDFs. Functional.	A polished landing page with your narrative front and centre.
Navigation	Judges click through subfolders.	Judges follow a designed pathway: Home → Categories → Evidence.
RSC Keywords	Hidden inside PDFs.	Visible on every page, woven into headings and descriptions.
Category 5 Evidence	Screenshots of Instagram.	A LIVE website IS the evidence. The site itself proves digital outreach.
"Latest Technology"	Google Drive is not impressive.	A custom-built website signals technological fluency.
University Applications	Cannot be referenced.	A permanent URL for your personal statement and CV.

THE DOUBLE WIN

The website is not just a delivery mechanism for evidence. It IS evidence. A professional, branded website with blog articles, embedded videos, and structured evidence pages is direct proof of Category 5 (digital outreach using latest technology). The site itself earns you marks.

2. Website Structure — The Sitemap

The website has 8 pages. Each page maps directly to what RSC judges need to see. The structure is designed so a judge can find any piece of evidence within 2 clicks from the homepage.

Page	Content	RSC Category
1. Home / Landing	Hero banner, mission statement, CATS Insights logo, navigation to all sections. The RSC Category Mapping Table. Executive summary.	All — this is the judge's entry point
2. About CATS Insights	Organisation overview, team structure (27 members, 3 tiers), org chart, governance, foundational documents, succession plan.	Institutional legacy evidence
3. Chemistry of Kent (Blog)	Full-length articles: White Cliffs of Dover, Pfizer Sandwich, Kent Hop Chemistry. Oxford referencing with DOIs. Each article on its own sub-page.	Category 2 (History of Chemistry) + Category 5
4. Teaching Resource	Embedded $CaCO_3$ infographic (viewable + downloadable PDF). Teacher acknowledgement screenshot. Instagram post metrics.	Category 1
5. Workshop	Workshop overview, photos gallery, video embed, materials (downloadable PDFs), Workshop Impact Report, attendance data.	Category 3 (STEM Event)
6. Mentoring	Editorial workflow diagram, before/after writing samples, student testimonials, Mentoring Impact Tracker data, feedback screenshots.	Category 4
7. Digital Outreach	Instagram feed embed or screenshots, Metrics Log summary table, follower growth chart, engagement highlights (saves/shares).	Category 5
8. Impact Report	The full 2–3 page Impact Report as a viewable page (not just a PDF download). Project video embedded from YouTube.	All categories

3. How to Build the Website — Step by Step

You have zero coding experience. That is fine. Google Antigravity is an AI-powered code editor that writes the entire website for you from a text prompt. You describe what you want; it builds it. Then you drag the output folder onto Netlify and the site is live. Total time: 2–4 hours.

Phase A: Set Up Your Tools (30 minutes)

Step 1: Download and install Google Antigravity from antigravity.google/download. It is free for personal Gmail accounts. Available on Mac, Windows, and Linux.

Step 2: Sign in with your personal Gmail account. The free plan includes generous usage of Gemini 3 Pro (the AI model that will write your code).

Step 3: Create a new empty folder on your computer called "cats-insights-website". This is where Antigravity will generate all the website files.

Step 4: Open Antigravity. Click "Open Folder" and select the cats-insights-website folder you just created.

Step 5: Go to netlify.com and create a free account (sign up with your email). You do not need to do anything else there yet — just have the account ready.

OPTIONAL: CUSTOM DOMAIN (~£10/YEAR)

If you want catsinsights.co.uk or catsinsights.com instead of a .netlify.app URL, buy a domain from Namecheap (namecheap.com) or Porkbun (porkbun.com). Both cost approximately £8–12 per year. You can connect it to Netlify later. A custom domain is not required but looks significantly more professional for RSC judges and university applications.

Phase B: Generate the Website with Antigravity (1–2 hours)

This is the core step. You will paste a detailed prompt into Antigravity's Agent interface, and it will generate the entire website. The prompt below is engineered to produce a professional, multi-page static site with your exact branding, content structure, and evidence layout.

How to use the Agent:

Step 1: In Antigravity, look for the Agent panel (it may be on the right side or accessible via a chat icon). This is where you type instructions.

Step 2: Copy and paste THE ENTIRE PROMPT from Section 4 of this document into the Agent chat.

Step 3: Press Enter/Send. Antigravity will start generating a task list, then begin creating files. This may take 5–15 minutes. Let it work. Do not interrupt it.

Step 4: When it finishes, it will have created an index.html file and possibly multiple HTML files, a styles.css file, and any other assets. You will see these files appear in the folder panel on the left.

Step 5: Antigravity may open a browser preview automatically. Check the site looks correct. If anything needs changing, type a follow-up instruction like: "Change the header colour to #0C2340" or "Add a section for the project video on the Impact Report page."

Step 6: Once satisfied, you have a complete website in your cats-insights-website folder. Every file you need is there.

CRITICAL: REVIEW THE OUTPUT

Antigravity is powerful but not perfect. Before deploying, check: (1) All pages load correctly in the preview, (2) Navigation links work between pages, (3) Your brand colours are correct (Harrow Blue #0C2340, Harrow Gold #89764B), (4) Chemical equations display properly ($CaCO_3$, not CaCO3), (5) No placeholder "Lorem ipsum" text remains. If you find issues, tell the Agent what to fix. It will correct them.

Phase C: Add Your Content (30–60 minutes)

Antigravity will generate the website structure with placeholder content based on your prompt. You now need to replace placeholders with your actual evidence. There are two ways to do this:

Method 1: Tell the Agent (easiest)

Type instructions like: "Replace the placeholder text on the Workshop page with the following content: [paste your workshop details]." The Agent will update the files for you.

Method 2: Edit files directly

Open the HTML files in Antigravity's editor. Find placeholder text and replace it. This is like editing a Word document — the text between HTML tags is what appears on the page. You do not need to understand the code around it.

Content you need to add:

- Your actual blog articles (White Cliffs, Pfizer Sandwich) — paste the full text
- Real metrics from your Instagram Analytics Log (reach, saves, shares, follower count)
- Workshop details (date, attendance number, learning objectives, outcomes)
- Student testimonial quotes (anonymised)
- Mentoring data (before/after metrics from your Mentoring Impact Tracker)
- Your YouTube video URL (for embedding on the Impact Report page)
- PDF files: infographic, Impact Report, workshop materials — place these in the website folder and link to them as downloads

• Photos: workshop photos, team photos, infographic in classroom — place in an "images" subfolder

---

Phase D: Deploy to Netlify (10 minutes)

Step 1: Go to app.netlify.com and log in.

Step 2: On your dashboard, scroll to the bottom or click "Add new site" → "Deploy manually".

Step 3: You will see a drag-and-drop zone that says something like "Drag and drop your site output folder here".

Step 4: Open the cats-insights-website folder on your computer. Drag the ENTIRE FOLDER (or its contents if there is a "dist" or "build" subfolder) into the Netlify drop zone.

Step 5: Wait 10–30 seconds. Netlify will upload all files and deploy your site.

Step 6: Netlify will give you a URL like: https://random-name-12345.netlify.app. Your site is now LIVE on the internet.

Step 7: Click "Site configuration" → "Change site name" to rename it to something like: catsinsights.netlify.app (if available).

Step 8: Test the live URL in an incognito browser. Test on your phone. Verify every page loads.

UPDATING THE SITE LATER

If you need to make changes after deploying: edit the files locally (or use Antigravity to make changes), then go to your site's Deploys page on Netlify and drag-and-drop the updated folder again. Netlify will replace the old version with the new one. Takes 30 seconds.

Optional: Connect a custom domain

If you purchased catsinsights.co.uk or similar: Go to Site configuration → Domain management → Add custom domain. Netlify will give you DNS settings to enter at your domain registrar (Namecheap/Porkbun). Follow the instructions on screen. It takes 10–30 minutes for DNS to propagate. Netlify provides free SSL (HTTPS) automatically.

4. The Antigravity Prompt

Copy this ENTIRE prompt and paste it into Antigravity's Agent chat. Do not modify it unless you want to change specific details. This prompt has been engineered to produce a complete, multi-page, responsive website with your exact branding.

IMPORTANT

Copy EVERYTHING inside the code box below. Do not leave out any section. The prompt is long because it needs to be — the more detail you give the AI, the better the output. Paste it in one go.

```
Build me a complete, multi-page static website for "CATS Insights" — a
student-led STEM academic publication from The Worthgate School, Canterbury,
Kent. This website serves as the official evidence portfolio for the RSC Kent
Young Chemist Award 2026 submission. It must look professional, institutional,
and polished — not like a student project.

BRAND IDENTITY:
- Primary colour: Harrow Blue #0C2340 (headers, navigation, hero sections)
- Secondary colour: Harrow Gold #89764B (accents, highlights, buttons, dividers)
- Background: White #FFFFFF with very subtle light grey #F8F9FA for alternating
sections
- Body text: Dark #1A1A1A, font: Inter or system sans-serif, 16px base
- Headings: Bold, Harrow Blue
- Links/buttons: Harrow Gold with Harrow Blue hover state
- The website should feel like an academic institution's site — clean,
authoritative, minimal

TECHNICAL REQUIREMENTS:
- Pure HTML + CSS + minimal vanilla JavaScript (NO frameworks, NO React, NO
build tools)
- Fully responsive (mobile-friendly — judges may view on phones)
- Each page is a separate .html file
- All CSS in a single styles.css file
- All images go in an /images/ folder
- All downloadable PDFs go in a /documents/ folder
- Navigation bar on every page with links to all sections
- Footer on every page with copyright and school name
- Use placeholder images where needed (I will replace them later)
- Use Unicode for chemical subscripts throughout

PAGES TO CREATE:

PAGE 1: index.html (HOME) - Hero section, mission statement, RSC Category
Mapping Table, navigation cards to each evidence section

PAGE 2: about.html (ABOUT) - Organisation overview, team cards, 3-tier
structure, governance, succession planning

PAGE 3: chemistry-of-kent.html (BLOG INDEX) - Cards linking to 3 articles: White
Cliffs, Pfizer Sandwich, Kent Hops

PAGE 3a: white-cliffs.html - Full article with sections on coccolithophores,
chemical erosion, thermal decomposition, environmental significance

PAGE 3b: pfizer-sandwich.html - Full article on Pfizer history, fluconazole,
sildenafil, Discovery Park

PAGE 3c: hop-chemistry.html - Full article on alpha-acids, beta-acids, terpenes,
brewing chemistry

PAGE 4: teaching-resource.html - CaCO3 infographic embed, PDF download, teacher
endorsement

PAGE 5: workshop.html - Photo gallery, video embed, materials downloads, impact
data

PAGE 6: mentoring.html - Editorial workflow diagram, before/after case studies,
testimonials
```

```
PAGE 7: digital-outreach.html - Instagram metrics, post gallery, engagement
analysis

PAGE 8: impact-report.html - Full report text, embedded YouTube video, PDF
download

DESIGN: Sticky navbar, responsive, cards with shadows, generous whitespace,
fade-in animations, mobile hamburger menu.
```

NOTE: The full prompt with complete page-by-page specifications is provided in the companion text file: CATS_Website_Prompt.txt. The prompt above is the condensed version. For maximum quality output from Antigravity, use the full version from the text file.

5. After Deployment — Content Population Checklist

Once the site structure is live, systematically replace all placeholder content with your real evidence. Work through this checklist page by page.

Home Page (index.html)

- ☐ Replace mission statement placeholder with your actual text
- ☐ Verify RSC Category Mapping Table has correct information
- ☐ Add CATS Insights logo image to /images/ folder and update the hero section

About Page (about.html)

- ☐ Add real team member names, roles, and quotes
- ☐ Add team photos to /images/ folder
- ☐ Verify organisational structure description matches your current setup

Chemistry of Kent Articles

- ☐ Paste full White Cliffs article text (from your existing content)
- ☐ Paste full Pfizer Sandwich article text (from Pfizer_Sandwich_Post4.docx Part B)
- ☐ Write or paste Hop Chemistry article
- ☐ Add real references with DOIs to each article
- ☐ Add Editorial Notes (Turnitin/GPTZero disclosure) to each article

Teaching Resource Page

- ☐ Add infographic image to /images/ and update the embed
- ☐ Add infographic PDF to /documents/ and update download link
- ☐ Add teacher acknowledgement screenshot
- ☐ Add Instagram post metrics for the infographic post

Workshop Page

- ☐ Add 5–10 workshop photos to /images/
- ☐ Replace YouTube embed placeholder with your real video embed code
- ☐ Add workshop material PDFs to /documents/ and update download links
- ☐ Fill in real attendance, outcome, and improvement data
- ☐ Add real student quotes

Mentoring Page

- ☐ Add real before/after metrics for Students A, B, C
- ☐ Add real student testimonial quotes
- ☐ Add feedback screenshots to /images/
- ☐ Verify editorial workflow diagram is accurate

Digital Outreach Page

- ☐ Fill in real Instagram metrics from your Analytics Spreadsheet
- ☐ Add post screenshots to /images/
- ☐ Add follower growth numbers

Impact Report Page

- ☐ Paste full Impact Report text or key sections
- ☐ Replace YouTube embed with real video
- ☐ Add Impact Report PDF to /documents/ for download

After updating content, drag-and-drop the updated folder onto Netlify again to redeploy. Test in incognito.

6. Alternative Options (If Antigravity Does Not Work)

If you encounter issues with Antigravity (installation problems, model limits, etc.), here are backup approaches ranked from most to least recommended:

Option B: Use Claude to Generate the Website

You can use this exact same prompt from Section 4 with Claude (right here in this chat). Ask Claude to generate the HTML/CSS files. Claude will create artifacts that you can download. Save them into a folder and deploy on Netlify the same way. This is the easiest backup.

Option C: Framer (framer.com)

Framer is a no-code website builder with beautiful templates. It has a free tier (with framer.site subdomain) and paid plans starting at approximately £5/month for a custom

domain. It is drag-and-drop — no coding required. The downside: less customisation than a code-generated site, and it may not handle blog articles as cleanly.

Option D: Carrd (carrd.co)

Carrd creates single-page websites. The Pro tier (£19/year) lets you create multi-page sites. Very simple, very clean. Good for a minimal evidence portfolio but less impressive than a full multi-page site.

Option E: Google Sites (sites.google.com)

Free, integrates with Google Drive, dead simple to use. The downside: it looks like Google Sites. Every judge will recognise the template. It does not signal “latest technology” or “creativity.” Use this only as a last resort.

MY RECOMMENDATION

Antigravity + Netlify is the best path. It produces a genuinely custom website, it is free, and it demonstrates real technological initiative. If Antigravity gives you trouble, come back to this chat and I will generate the entire website for you as a set of files you can download and deploy directly.

7. Timeline Integration

The website build slots into your existing RSC execution plan. Here is where it fits:

When	Task	Time Needed
This weekend	Install Antigravity. Run the prompt. Generate the site structure. Deploy empty shell to Netlify.	2–3 hours
As evidence is created	Add content progressively: articles first, then workshop evidence, then mentoring data, then metrics. Redeploy after each batch.	30 min per update
Day 14–15 (21–22 Mar)	Final content population. All pages complete. All images/PDFs uploaded. Video embedded.	1–2 hours
Day 17 (24 Mar)	QA: Test every page, every link, every download, on phone and desktop. Fix anything broken.	30 min
Submission day	Include the website URL in the nomination text and Google Form. The URL replaces (or supplements) the Google Drive evidence folder link.	—

THE URL IN YOUR SUBMISSION

When your teacher submits the Google Form, include the website URL prominently. In the nomination text, write something like: “The complete evidence portfolio, including blog articles, workshop documentation, and mentoring data, is available at [your-url]. The website itself was designed and built by Jason as part of the CATS Insights digital outreach programme.” This turns the website into both the delivery mechanism AND additional evidence of initiative.

Build it this weekend. Deploy it. Then fill it as evidence comes in.
