CATS Insights Proposal

Student-Led Academic Publication Initiative/Elective

Introduction

Founder & President: Kyal Sin Ye Yint (Jason), Year 12 (A1)
Main Faculty Advisor: Miss Emma (requested) (to be continued for further advisors such as Miss Lusy, Miss Julie, Mr Robin, Miss Annie, etc)
Timeline to First Publication: 5-6 months from approval
Long-term Vision: Expand to more CATS Global Schools as an interschool academic publication

CATS Insights is my proposed student-led academic publication initiative with the clear mandate to provide students with an accessible yet intellectually rigorous super-curricular opportunity while creating a platform for academic excellence within The Worthgate School. The overreaching objective is to cultivate scholarship by fostering critical thinking and instilling key skills into students whilst aligning our academic goals to create meaningful humanitarian impact which can scale across more CATS institutions. CATS Insights is my reimagination of what student intellect can achieve given structure, direction and purpose, and it is my belief that the scholarship to be found will empower students to become young intellectuals and global citizens.

This initiative builds upon the successful operational model of HIS Insight (Harrow International School Bangkok), which is a student publication that has successfully produced multiple editions and engaged hundreds of student contributors over the years. CATS Insights represents an evolution of this model, as it is a coagulation of the best practices drawn from established publication systems, refined through my critical observations and reimagined through my own conceptual framework.

Rather than imitating the old structure and conventions, CATS Insights is built upon my reconceptualisation of the fundamental goals, procedures and architecture in order to pioneer a platform that innovates and builds upon HIS Insights into something more adaptive, inclusive and ambitious. These innovations are informed by my critical observations over several years of involvement with HIS Insights, during which I examined both its accomplishments and limitations from a leadership position. Alongside this, my participation in various other student-led organisations allows me to scrutinise how leadership, collaboration and organisation play a vital role in the success of an initiative.

Through my experience and analysis, I have designed CATS Insights to be a more dynamic and scalable model that will hopefully amplify the potential for growth and impact of HIS Insights.

Article 1: PROJECT OVERVIEW

Mission Statement

To create a student-run academic publication that showcases rigorous STEM scholarship, provides valuable super-curricular opportunities, and establishes The Worthgate School as a leader in student academic achievement.

Core Objectives

CATS Insights operates according to five fundamental objectives, each reflecting my values and commitment to intellectual engagement and making meaningful impact:

Objective 1 – Academic Excellence and Intellectual Curiosity

To publish high quality, peer reviewed student research and articles that demonstrates rigorous academic scholarship that meets university-level academic standards. Contributors must produce work they themselves would read and learn from, rather than merely submitting unsubstantive essays for impressive sounding credentials for university applications. Quality assurance protocols will ensure scholarly integrity while preserving student voice and creative ideas.

Objective 2 – Accessible Student Leadership & Skill Development Opportunity

To provide all interested students with genuine opportunities to develop research, writing, editorial, organisation, leadership and project management skills regardless of prior experience or academic standing. This objective democratises super-curricular engagement while offering invaluable leadership roles with real decision-making authority and responsibilities that will cultivate and foster transferable skills for academic and professional life. Leadership opportunities will be designated for mentorship and collaborative growth rather than aggrandisement.

Objective 3 – Intellectual Exploration & Interest Discovery Platform

To empower students to pursue STEM topics or fields of academic study that genuinely fascinate and interest them and this includes areas beyond the classroom syllabus or examination requirements. This objective seeks to nurture curiosity driven learning which will be free from examination grade pressure to encourage exploration of recent research, emerging technologies and interdisciplinary learning on foreign and new academic fields which students might not be familiar on. My goal is intrinsic intellectual proactivity–to learn new things for the joy of it rather than staying in one’s comfort zone and studying only in the most basic scope like it is a menial chore.

Objective 4 – Legacy & Sustainable Impact

To develop institutional frameworks, documentation and organisation systems that ensure CATS Insights benefits students long after I graduate. This is based on my commitment to collective impact for my fellow students rather than for my own individual gain. Through long-term thinking, my goal is to embed comprehensive operational manuals, tutorials and templates, lessons and protocols into the constitution of CATS Insights and its student culture. This will ensure that future generations can continue to benefit from my endeavour sustainably. I wish to build something that will endure and matter beyond my tenure.

"Legacy, what is a legacy? It's planting seeds in a garden you never get to see." - Lin-Manuel Miranda

Objective 5 – Community Impact & Social Responsibility

To extend STEM and academic access to underprivileged students and peoples through structured charitable initiatives. These could include virtual workshops or hands-on workshops inspired by published articles, mentorship programmes and the development and donation of accessible educational resources to schools and community centres. It is my conviction that intellectual achievement and social responsibility go hand in hand. Scholarship cannot exist for just one's benefit but must rather cause tangible societal good. Once operational stability is achieved (I anticipate in Year 2), CATS Insights will propose further charitable initiatives sustainably to create meaningful action and impact.

Target Audience (Primary)

- Writers/Contributors: Years 9-13 students interested in STEM and academic fields seeking a super-curricular activity (the idea is that reading and engaging with the magazine will qualify as a super-curricular as the students are exploring their academic interests, similar to reading a book or taking a course)
- Readers: Students, parents, teachers, and university admissions officers
- Beneficiaries: Younger students exploring STEM interests and other academic fields along with underprivileged students through charitable outreach (Year 2 goal)

Publication Framework

CATS Insights begins as a STEM-focused publication for students in Years 9–13, building upon the proven foundation of HIS Insights while refining its academic depth and operational structure. But for me, this is just a starting point. The framework is deliberately architected for scalability so that expansion is possible when quality, demand, and capacity aligns.

Potential Future Publications:

1. **CATS Insights Junior** – Simplified STEM content tailored for Years 7–9 and distributed to underprivileged schools and young students. This initiative aims to achieve Objective 5 by extending academic access and educational reach to create

social impact.

2. **CATS Perspectives** – A humanities and social sciences counterpart exploring economics, philosophy, psychology, politics, literature and other academic fields of study. This would operate under identical editorial, ethical and academic standards, ensuring cohesion between the different journals.

3. **CATS Advanced Research** – A platform for university-level investigations and EPQ-esque projects, supported by external expert review (professors, graduate researchers that we can find). This would elevate the publication to new levels which I hope to see.

These possibilities are my intentions and ambitions for the future, not promises I will make. Expansion will occur when:

- The primary STEM publication demonstrates sustained excellence across editions.
- There is clear interest and participation to justify the undertaking.
- The team's capacity can support growth without diluting existing quality.
- Faculty advisors confirm the feasibility of extended operations.

A core principle that I wish to implement for CATS Insights is to maintain an adaptive framework that actively seeks and integrates opportunities from across the school community. For example, we will look into a collaboration with the Fine Art department to feature student artwork to both provide a valuable platform for artists while gaining valuable designs that can be utilised for certain publications. Similarly, the initiative is structured to align with the requirements of the Duke of Edinburgh's Award, allowing student contributions to be recognised under "Skills" or "Volunteering" sections. This is to encourage more students to participate and join us to benefit CATS Insights with more student attention whilst benefiting them by providing an opportunity for them to fill out their logs to get their DofE award. These examples demonstrate how I want the initiative to always be adapting, taking full advantage of opportunities when they present themselves.

Article 2: PROOF OF CONCEPT

2.1 Case Study Overview

This proposal is an evidence-based adaption of a demonstrably successful operational model. HIS Insight (Harrow International School Bangkok) gives us concrete evidence of potential and sets the precedent to validate the feasibility, sustainability and potential impact of student-led academic publications.

For me, it shows proof of concept, it demonstrates that students, when given structure, guidance and teacher oversight, possess the capacity to produce genuinely substantive academic work which can reach high standards of publication quality.

2.2 Key Metrics and Achievements

- **4 published editions** successfully produced and distributed
- **Digital distribution** to the entire school community (numerous students and parents and faculty) with zero printing costs
- **Sustainable leadership transition** from founding team to successor teams across leadership cycles which demonstrates sustainability of the initative across year groups
- **Teacher endorsement** from Head of Biology and integration into school super-curricular activity opportunities
- **Diverse STEM content** spanning medicine, engineering, mathematics, cosmology, and emerging technologies
- **Quality assurance system** using peer editing, faculty review, and plagiarism checking

Contributors to HIS Insights also developed transferable academic skills including:

- Literature review methodology and credible source evaluation
- Academic writing experience according to Oxford citation standards
- Peer review processes and constructive feedback communication
- Plagiarism detection protocols
- Project management and collaborative deadline coordination
- Editorial decision-making and quality assurance evaluation

Content scope and intellectual breadth:

HIS Insights has published rigorous STEM content spanning across various fields: medicine (chemotherapy mechanisms, artificial hearts, morphine pharmacology, thalidomide regulation), engineering (renewable energy, maglev trains, structural dampers), biology (endocrine disruptors, genetic engineering, heart valve disease), computer science (quantum computing, AI impacts, data science applications), mathematics (Basel problem, stable marriage problem), and cosmology (exoplanet detection, astronomical phenomena). This impressive intellectual range demonstrates that students, properly supported, can engage with complex contemporary research across many different disciplines.

2.3 Structural Limitations and Areas for Improvement

- Knowledge was kept in individuals rather than documented systems, complicating leadership transitions since processes and information were lost in the process.

- Lack of revenue limited long-term independence and charitable outreach.
- Institution-specific design restricted replicability.
- Succession planning was reactive rather than proactive meaning presidents would have to select successors in a rush which perhaps could lead to unwise selections.

2.4 CATS Insights Improvements

- Documentation and operations manuals will be drafted and be continuously developed starting from Day 1 in order to preserve institutional knowledge and ensure smooth transitions. This will ensure that future generations will be able to replicate the success that their predecessors had.
- Financial sustainability will be achieved with a plan on how to minimise initial and running costs while keeping digital access free. Along with this fundraisers and other initiatives will be taken in order to generate revenue for charitable outreach and other various costs.
- Scalability by making sure that the initiative can be replicated across CATS Global Schools.
- Succession planning will be utilised so that students can shadow leadership in advance to learn from them. Presidents will also ensure identification of their successor to ensure clear and easy transitions. Along with this, modes of communication will be set up for the future generations to be able to contact their predecessors for advice or guidance.
- Accessibility and quality will be improved upon with more striking designs with a larger staffed design team (HIS Insights was always lacking in designers), a three-tier review, and an optional external expert consultation to improve the quality of the article (quality control was always a priority).

HIS Insight's busy history proves that this initiative is achievable. CATS Insights builds on this foundation with improvements such as deliberate succession planning and institutional frameworks, ensuring the initiative endures over time and creates lasting impact.

Article 3: ORGANIZATIONAL STRUCTURE & LEADERSHIP FRAMEWORK

3.1 Founder and President Authority

Kyal Sin Ye Yint (Jason) serves as Founder and President, holding executive authority over all operational, editorial, and strategic decisions of CATS Insights.

The overreaching point of this leadership strategy is to establish clarity and is designed to provide unambiguous direction during the fragile initial establishment phase of this complicated initiative that I am proposing. This is not autocracy but rather a strategy that I developed after observing numerous student organisations struggle with decision paralysis

and factional disputes. From my experience, clear authority during establishment prevents the issues that could arise when various different visions fragment focus and dilute effectiveness.

Why would I want this structure for student leadership?

- A single strategic direction ensures consistency across all operational parts rather than competing agendas that can dilute focus on the core objectives
- There must be unambiguous responsibility for outcomes, faculty relationships, and quality standards. Someone has to own the results
- When challenges inevitably arise, decisions must be made quickly and thoughtfully, and I always find that the bureaucratic process limits organisations' ability to respond to crises. Of course I would take in feedback and listen to my peers but it is important that the factional infighting I have so commonly seen be prevented

This model of concentrated authority is deliberately temporary. Leadership will be transferred with structured transitions planned for Years 2-3. The goal is to establish a sustainable platform that outlasts me and will allow CATS Insights to evolve naturally under capable successors that meet a certain criteria of outstanding student leadership. Once the initiative has consolidated properly, I anticipate the new leadership team to be more democratic as per the ideal balance of autonomy and collaboration.

3.2 Leadership Team Architecture

The leadership team is deliberately compact, with five captains (six if needed). This constraint prevents dilution of responsibility and avoids "too many chiefs" dysfunction and ensures each captain holds real decision-making power.

Captains must make substantive choices on content standards, resource allocation, and priorities, which will help them build transferable skills essential for university and professional contexts. I have also summarised, along with the responsibilities of the captains, the skills they will be developing, how this will benefit their university applications and the time commitment they will have to make, which should allow students to make proper decisions on whether they would like to apply for a position or not.

LEAD WRITER
Primary Responsibilities:

- Oversee the quality of all submitted articles, ensuring they meet rigorous academic standards
- Mentor writers through constructive feedback and developmental guidance
- Review drafts for clarity, argumentation, and adherence to writing conventions and citation standards
- Enforce stylistic consistency to maintain a cohesive publication voice

- Coordinate closely with the Lead Editor on revision cycles and publication readiness

Skills Developed Through This Role:

- Editorial Judgment: Assessing quality, identifying weaknesses, and determining publication readiness of an article
- Mentorship & Communication: Providing feedback that strengthens work without discouraging contributors instead nurturing improvement for students
- Quality Standards Enforcement: Making difficult calls on revisions or rejections when necessary when an article is unfit for publishing
- Time Management: Balancing multiple writers' schedules while delivering timely guidance and collating student articles in time for deadlines
- Conflict Navigation: Handling disappointed contributors diplomatically and civilly

Why This Matters for University Applications:
Universities value students who can evaluate intellectual work critically, mentor peers, and maintain high standards under pressure. This role demonstrates that a student would have the capacity for analytical thinking, clear communication, and collaborative leadership which are skills sought in research and academic teams.

Time Commitment: 4-6 hours weekly during writing phases; 1-3 hours otherwise

---

LEAD EDITOR
Primary Responsibilities:

- Manage the editorial workflow, coordinating peer review, revisions, and quality assurance
- Assign articles to editors and monitor review timelines as so deadlines are met timely
- Oversee revision cycles, ensuring feedback is implemented effectively and efficiently
- Verify citations for accuracy and carry out the quality control process carefully in order to maintain academic integrity
- Conduct final quality checks before faculty submission in the quality assurance process

Skills Developed Through This Role:

- Project Management: Coordinating multiple processes with deadlines
- Attention to Detail: Detecting errors others might overlook and ensuring consistency across publications
- Diplomatic Problem-Solving: Resolving disagreements between writers and editors effectively and efficiently as so students are not stuck in a purgatory of having their articles under consideration for rejection or approval for extended periods of time
- Organizational Systems: Maintaining workflow tracking, version control, and deadline monitoring so that editions can be published in a timely manner

- Quality Control: Developing systematic approaches to ensure nothing falls through the cracks

Why This Matters for University Applications:
Universities seek students capable of managing complex projects with many variables. This role demonstrates organisational capacity, methodical thinking, and respect for collaborative work, which is essential for research, group projects, and professional environments.

Time Commitment: 5–7 hours weekly during editing phases; 1–3 hours otherwise

---

LEAD DESIGNER
Primary Responsibilities:

- Develop the visual identity and ensure cohesive branding for CATS Insights
- Design page layouts to transform text into visually engaging publications which is engaging and pleasant for the reader
- Maintain branding consistency across all materials and publications
- Manage design platforms (Canva or alternatives)
- Coordinate the design team to distribute work and maintain quality
- Work with the Media Coordinator when necessary for marketing purposes

Skills Developed Through This Role:

- Visual Communication: Translating complex academic content into accessible graphics
- Aesthetic Judgment: Balancing appeal, readability, and professionalism
- Technical Proficiency: Mastering design software and digital publication tools
- Creative Problem-Solving: Navigating constraints while maintaining quality
- Iterative Refinement: Improving layouts through feedback cycles

Why This Matters for University Applications:
Universities value students who can communicate visually and solve creative problems. This role demonstrates technical expertise, design acumen, and the ability to understand complex essays and translate them into engaging and pleasant visual expressions.

Time Commitment: 4–6 hours weekly during design phases; 1–2 hours otherwise

---

MEDIA COORDINATOR
Primary Responsibilities:

- Create and post content across social media (Instagram primary platform)
- Develop marketing campaigns to attract contributors and audience engagement along with potential customers and beneficiaries

- Monitor audience engagement and respond to feedback
- Track analytics to adjust strategies to optimise publication success
- Design promotional graphics and announcements

Skills Developed Through This Role:

- Strategic Communication: Crafting messages that resonate and stick with audiences
- Data-Driven Decision Making: Using analytics to refine strategies and improve upon data which shows learning from past experiences
- Consistent Execution: Maintaining a regular posting schedule as so retention grows
- Brand Voice Development: Creating a unified and consistent communication style with the audience which attracts the target audience

Why This Matters for University Applications:
Universities value students who can translate academic work into public communication, engage communities, and apply data to decision-making. Along with this, it shows an aspect of public speaking and oration, as communication with others is always an invaluable skill. This role demonstrates strategic thinking, consistency, and digital literacy.

Time Commitment: 2–4 hours weekly

QUALITY ASSURANCE LEAD
Primary Responsibilities:

- Conduct Turnitin plagiarism checks to ensure originality (Coordinate with Miss Julie)
- Screen for AI-generated content and verify authentic student articles
- Verify citations and source accessibility and reliability
- Coordinate faculty review and implement requested changes
- Uphold academic integrity through strict enforcement of standards
- Carry out the quality assurance process in order to ensure articles meet the standard set

Skills Developed Through This Role:

- Ethical Judgment: Making decisions on integrity violations and appropriate responses as to maintain academic integrity
- Systematic Verification: Ensuring all content meets academic standards
- Difficult Conversations: Addressing integrity concerns diplomatically but firmly
- Documentation Skills: Maintaining records of checks and issues identified so that potential issues can be preemptively identified
- Standards Enforcement: Upholding principles even when inconvenient

Why This Matters for University Applications:
Universities prioritise integrity and reliability. This role demonstrates a show of character and

strong ethics, meticulous attention to detail, and courage to enforce standards which are qualities essential for research and leadership.

Time Commitment: 3–5 hours weekly during review phases; minimal otherwise

---

SECRETARY

Primary Responsibilities:

- Manages all internal team communications, schedules all leadership and all-team meetings, and is responsible for recording and distributing official meeting minutes. Manages and aids the President in completing the agenda.
- Serves as the assitant administrator to the President for the team's digital workspace (Google Drive, MS Teams), ensuring all documents are organised and accessible.
- Takes responsibility for aiding in the development and updating of the **Operations Manual** with the President.
- Assists the President with administrative tasks.

Skills Developed Through This Role:

- Administrative Management: Mastering professional communication, scheduling, and high-level record-keeping.
- Information Architecture: Designing and maintaining complex organizational systems for documentation.
- Process Documentation: Translating team actions, decisions, and workflows into clear, permanent institutional knowledge.
- Operational Awareness: Gaining a high-level view of all team functions and ensuring they work in concert.

Why This Matters for University Applications: Universities value students who create order and enable teams to function efficiently. This role demonstrates exceptional organizational capacity, meticulous attention to detail, and a focus on long-term sustainability. It proves you are a systems-builder, a quality essential for managing complex academic projects and leading professional teams.

Time Commitment: 3-5 hours weekly

HEAD OF ACADEMIC DEVELOPMENT

Primary Responsibilities:

- Designs and leads internal training workshops/lessons for all team members (e.g., "How to Conduct University-Level Research," "Mastering Oxford Citations," "Academic Writing 101"), aiding the President with these tasks.

- Collaborates with the President and Lead Writer to collate, create, and maintain all training resources, templates, and guides.
- Acts as the primary mentor for new members, ensuring they understand and can meet the publication's rigorous academic standards.
- Serves as the team's subject-matter expert on academic integrity, writing standards, and research methodology.

Skills Developed Through This Role:

- Mentorship: Developing the ability to teach and explain complex concepts effectively to peers.
- Curriculum Design: Structuring knowledge into logical, effective, and engaging training sessions.
- Public Speaking & Communication: Gaining confidence in leading workshops and presenting information clearly.
- Expertise Development: Achieving a deep mastery of academic standards and writing techniques.

Why This Matters for University Applications: This role is a powerful differentiator. It demonstrates not only your mastery of academic skills but also your ability to *teach* those skills to others. It shows leadership through education, a high level of intellectual confidence, and a commitment to elevating the entire team's performance, all of which are highly valued in university seminars, research labs, and tutorials.

Time Commitment: 2-4 hours weekly (depends)

HEAD OF COMMUNITY OUTREACH

Primary Responsibilities:

- Takes responsibility of executing "Objective 5: Community Impact & Social Responsibility" with the President.
- Leads the planning, organization, and execution of STEM workshops for local schools and community centres.
- Develops and adapts published articles into accessible educational resources (guides, worksheets, presentations) for donation.
- Manages the future "Mentorship Program," connecting team members with younger, underprivileged students for community outreach.
- Coordinates all charitable-giving efforts, such as the distribution of free print editions.
- Manages all charitable endeavours and connections with charities and local communities

Skills Developed Through This Role:

- Program & Event Management: Planning and executing complex, real-world events from ideation to completion.

- Public Engagement & Science Communication: Learning to adapt complex academic content for a general, non-expert audience.
- Community Leadership: Building and managing relationships with external organizations (schools, charities).
- Logistics & Planning: Managing volunteers, timelines, and resources for community-facing projects.

Why This Matters for University Applications: This role provides tangible proof of leadership and social responsibility. It demonstrates your ability to take intellectual work and create a meaningful, real-world impact. Admissions officers value applicants who show initiative beyond their own school, proving you can manage complex projects that benefit the wider community. The impact you have on your local community is also a very important weighing factor in university applications

Time Commitment: 1-5 hours weekly (depends)

I intend to also share this document with my captains, and below I have outlined the issues that could potentially arise in the future just to ensure that there is no ambiguity about their responsibilities. This is a practice I picked up from my time as Head Student of SR5, and I found that when students are unsure whether an issue falls into their responsibilities or not, they often just defer to leaving the issue be for a teacher or the head student to solve themselves. These should serve as an example of what the student captains will be expected to do.

Potential Issues

Quality vs. Deadline Conflicts
Delays are the bane of every publication, and I remember back in HIS Insights, meeting the yearly deadline for publishing an edition was always stressful. Everyone suffers from the peer review processes that stretch for months despite requiring only hours of work and I know this is the case because a few articles I have written myself were stuck in the abyss for months on months without any progress just because of the backlog of articles that needed to be checked. When articles aren't ready by the deadline, the captains must decide to either delay publication to preserve quality or publish fewer pieces to maintain the schedule I set.

Contributor Disagreements
Conflict is inevitable, and disagreements often arise from misunderstandings on how each person interprets intent and mistakes. When writers resist editorial feedback, they often believe it is unfair or misinformed. Lead Writers and Editors must mediate without bias so that the contributor does not feel disrespected while ensuring that academic integrity and quality is not compromised. They must be able to clearly communicate with the contributors on why their article may or may not be acceptable, and this requires a level of empathy for the contributor along with skilful communication to get the message across politely.

Budget and Opportunity Cost
It's practically a tradition for Insights to be underfunded, and limited funds mean difficult choices. Captains must make arguments and defend those choices before the President.

From what I saw, Lead Editors would request editing/writing software or a subscription to a platform to make the peer-review process more efficient, and the Lead Designer would argue that they need a subscription to graphic designing platforms instead. These disagreements on where the budget would go would often take up entire meetings, and the President would spend their time investigating the opportunity cost of these choices instead of spending their time on other issues, which would lead to setbacks and delays, and so I will expect captains to present their argument so that this process can be avoided or expedited.

Integrity Concerns
It is also always an issue that many young students lack experience with citation and academic oration and articulation, and this leads to unintentional mistakes and subpar work. When plagiarism, deliberate or accidental, presents itself, the Quality Assurance Lead must act firmly to uphold our zero-tolerance standards while guiding the student to improve and grow. Their decisions are critical to ensure that each edition does not contain any errors or work that is plagiarised or AI-generated. I expect them to make sure that every article waiting to be published has been rigorously and meticulously checked.

Other Various Issues

Students live complicated and busy lives with deadlines, exams, and personal circumstances. There can often be time conflicts and scheduling breakdowns, and these are among the most common reasons for missing deadlines for publishing an edition. When students are not committed or do not set their priorities straight, captains must redistribute responsibilities quickly and expediently to avoid conflicts and burnout for themselves. It is the reality that most students have their own set of priorities that do not coincide with others, and when a majority of the team are such, captains should bring up the issue and start looking for solutions.

3.3 Extended Team: Writers, Editors, Designers

Writers

- Commitment: One article per term
- Skills developed (just some of them): Research methodology, organisation, communication, critical thinking, source evaluation, resilience through revision cycles, and receptiveness to feedback

I think it is important for our writers to remember that their name appears on their work, and it is their ideas, their voice, their accountability and their responsibility.

Editors

- Primary Commitment: Peer review and developmental editing
- Skills developed (just some of them): Analytical reading, tactful feedback, stylistic precision, consistency, communication, leadership and fairness

Editors should remember that their editing directly determines what gets published, and poor feedback means poor quality articles get published.

Designers

- Primary Commitment: Layout and visual composition
- Skills developed (just some of them): Design software proficiency, visual communication, creativity, teamwork, collaboration and clarity

Designers should understand that the design of the edition dictates whether readers engage ignore the magazine, as unfortunately most people judge the book by the cover.

3.4 Captain Selection

Captains will be appointed by the president within the first four to six weeks of operation, following an observation period designed to assess their capability. These appointments will be purely merit-based on their performance, reliability, and leadership potential which will be observed.

Selection Criteria:

- Reliability: Steadfast attendance, punctuality, and follow-through on commitments.
- Academic Strength: Engagement with relevant subjects and capacity for learning and expertise.
- Time Management: Ability to balance multiple priorities and sustain productivity over time and under pressure.
- Collaboration: Strong and clear communication, emotional intelligence, and willingness to adapt.
- Initiative: Proactive problem-solving, innovation, and accountability for both success and failure.

Focusing on how students handle responsibility, meet deadlines, and navigate team dynamics, the captain positions will be offered and must be maintained and, if necessary, re-evaluated. In cases of sustained underperformance, roles may be reassigned based on the judgement of the President and Faculty Advisors.

Captains can learn through experience what is not usually taught which is how to lead a team through their conviction. They will develop the skills universities value most: strategic judgement, conflict navigation, ethical decision-making, critical thinking, and emotional intelligence.

Article 4: PUBLICATION WORKFLOW & QUALITY ASSURANCE

4.1 Content Standards & Formatting Requirements

Every article published under *CATS Insights* must satisfy the following specifications for the primary STEM publication (standards for future expanded publications will be developed if and when those initiatives launch):

Length Standards:

- Solo articles: 500-1000 words (with exceptions to be approved by the president)
- Collaborative pieces: 1,000-1,800 words (approximately 2-3 pages) (with exceptions to be approved by the president)
- Advanced research papers (if demand is there): 2,000-4,000 words with literature review (with exceptions to be approved by the president)

Stylistic Requirements:

- Voice: Third-person academic (no "I" or "we" unless specifically justified by the context)
- Tone: Accessible to readers in Years 9-13 to balance intellectual depth and clarity by avoiding unnecessary jargon but not oversimplifying complex concepts
- Structure: Clear introduction establishing context and thesis, logical body paragraphs with evidence-based arguments followed with a conclusion for the key points
- Evidence: All claims must be supported by appropriate citations from credible and verifiable academic sources (peer-reviewed journals, reputable scientific organizations, established academic texts)

Formatting Specifications:

- Font: Times New Roman or Arial (with special exceptions)
- Size: 11 point (depends on publishing and design team)
- Spacing: 1.5 line spacing with standard paragraph breaks
- Structure: Organized and logical paragraphs with clear topic sentences and logical transitions

Citation Standards:

- Style: Oxford referencing (mandatory) with footnotes or endnotes with a proper corresponding bibliography
- Scope: Citations must appear for all factual claims, data, direct quotes, and paraphrased ideas from sources
- Verification: All sources must be publicly accessible (no paywalled sources) and they must be established and credible
- Minimum: At least 3-5 credible sources per article and advanced research pieces will require more citations along with a more extensive bibliography

CATS Insight's primary focus will initially be on STEM disciplines: biology, chemistry, physics, mathematics, engineering, computer science, and medicine, along with interdisciplinary exploration. Future editions might explore connections to the economics, philosophy of science, or other academic fields where STEM intersects with other fields of academic study but our core identity is STEM-centered.

Editorial Standards & Content Guidelines:

All content must be:

- Factually accurate to the best of contributors' and editors' knowledge after thorough research
- Appropriate for school context by avoiding gratuitous violence, explicit content, or unnecessarily controversial topics and discussion
- Respectful of diverse and different perspectives by avoiding targeted or aggressive language and personal attacks
- Entirely original work, there must be no plagiarism and no excessive AI generation in the work so that it replaces human writing

Final authority over content appropriateness will be with the President, albeit with consultation with Faculty Advisors. Contributors will have intellectual ownership over their work but agree to editorial revisions to ensure that publication standards are met.

4.2 Three-Step Quality Assurance Procedure

CATS Insights will operate through a three-step verification system in order to uphold credibility, integrity and authenticity.

Step 1 – Peer Review & Initial Editing (Student-Led):

Each article undergoes an initial review by the editorial team which will focus on:

- Grammatical accuracy and stylistic consistency with publication tone
- Clarity and coherence of the material and logical coherence of structure
- Adherence to formatting specifications and citation requirements
- Readability for target audience (Years 9-13) without oversimplification
- Identification of unsupported claims or weak arguments

Automated support tools will be utilised at this stage:

- **Grammarly:** Grammatical error detection, punctuation correction and stylistic suggestions
- **Quillbot:** Readability analysis for enhanced clarity, tone and structural optimisation

Editors will provide constructive feedback to writers, who then will revise and resubmit. This process may repeat multiple times until the article meets quality standards for moving onto Step 2.

Step 2 – Authenticity Verification:

Step 2 will carry out a systematic authentication of content to ensure originality and academic honesty:

- Turnitin Analysis: We will carry out plagiarism detection via the school account (access confirmed through Miss Julie). All articles must achieve a similarity index below 20% (excluding the bibliography and citations), and any matches will be reviewed and investigated for plagiarism.
- AI Detection: We will carry out tests for AI-generated content using GPTZero or other similar tools to ensure the student actually wrote the article themselves. Articles flagged for high AI probability will be returned to writers for rewriting or explanation. CATS Insights has a zero-tolerance policy for fully AI-written content, however, AI tools for grammar checking, idea generation, or translation assistance are permitted when properly declared.
- Citation Verification: Each source will be cross-referenced to confirm that citations are not fabricated, sources are accessible to readers, there is no misquotation or distortion of the source and that sources meet credibility standards (they are peer-reviewed journals, established organizations or reputable publications)
- Fact-Checking: We will validate claims of the article against reputable sources when feasible, particularly medical, scientific, or statistical claims where misinformation could cause harm.

The Quality Assurance Lead will document all checks performed and flag any concerns for to the President and Faculty Advisors for review.

Step 3 – Faculty & Expert Review (optional):

- Optional Faculty Advisor Review: If possible, Miss Emma (or designated faculty representative) will conduct an evaluation of the compiled final edition for:
    - Appropriateness for school context and target audience
    - Factual accuracy
    - Approval for publication release
- Optional External Expert Consultation: For advanced research pieces that require more feedback and time that cannot be allocated by the school, CATS Insights may request or purchase a review from:
    - University professors or graduate researchers
    - Specialists in the field
    - Medical professionals for health-related topics

This optional step will only be taken when necessary which can be decided by the leadership team's discretion

4.3 Publishing Timeline Per Edition

Phase	Duration	Primary Activities	Responsible Parties

Planning & Assignment	2 weeks	Topic selection/requests, writer recruitment, preliminary research guidance, establishment of edition theme	President and the Captains
Writing and Learning Phase	6-8 weeks	Article drafting, ongoing mentorship and workshop lessons, iterative feedback on early drafts, etc	Writers, Lead Writer
Editorial Processing	3-4 weeks	Step 1 peer review, writer revisions, Turnitin plagiarism checks, AI screening, citation verification and fact-checking	Editors, Lead Editor, Quality Assurance Lead
Design & Layout	2-3 weeks (but can be ongoing throughout the entire timeline)	Visual design development, page formatting, graphic designing, and layout finalisation	Designers, Lead Designer
Final Review	1-2 weeks	Faculty advisor assessment, external expert consultation (if needed), final corrections and other preparations	Faculty Advisors, President, External Experts
Publication & Launch	1 week	Digital release, social media campaign for marketing, pre-order processing	Media Coordinator, Full Team

The full cycle should take approximately 5-6 months for an edition.

This timeline represents an educated estimate from HIS Insights experience and standard academic publication workflows, but the actual duration can be changed by:

- Academic examinations that are taking place for certain year groups can mean reduced availability for team members
- Holiday scheduling, since some team members may opt to continue working during breaks while others may not
- Unforeseen quality issues may arise which may require additional revision cycles when articles don't meet standards on first or second review

I will not rush publications in order to prevent errors that may damage the reputation. CATS Insights will prioritise quality always.

Article 5: FINANCIAL PLAN

One of CATS Insight's greatest strengths is how low-cost it is to run through the strategic use of free tools, digital distribution and school resources. There is a minimal opportunity cost in funding this initiative compared to others.

Budget Breakdown

Category	Item	Cost	Justification
Design Software	Canva for Education	**£0**	Provides professional templates, collaboration features, and export capabilities sufficient for high-quality publication design without paid subscription since there is a free for K-12 teachers subscription
Publishing Platform	Online platforms where articles can be published (e.g Issuu)	**£0**	The free tier will be sufficient for first 2-3 editions and we will only upgrade if needed
Plagiarism/AI Detection	Turnitin and GPTZero	**£0**	The free tiers are adequate and the school has a Turnitin account we can use for free
Marketing Materials	Posters, flyers (digital design)	**£0**	If utilising the school's resources, it should be free.
Print-on-Demand	Printing for pre-orders	**£6-9/copy but £0 upfront**	The cost to print the journal/magazine when someone orders will be covered by the payment but the school will print it for us in advance or we can outsource printing ourselves

Miscellaneous Fund	Accessibility tools and unforeseen costs	**£50-100**	Reserved for potential needs (e.g software subscriptions, emergency replacement of failed free tool, etc.)
Total Requested		**£50-100**	Likely to not need much funding at all but there are always miscellaneous costs that arise when students request something so it would be wise to have a rainy day fund

The expected expenditure is actually more like £0-50.

Revenue Model

Phase 1 (Editions 1-2):

- Digital edition: free via email/website distribution and other publishing platforms
- The goal is to prove the quality of our publication, build an audience and establish a reputation and credibility.
- Of course, if students and others wish to support, they can donate or buy a physical copy but this will be entirely optional (premium print edition) and the revenue will cover the printing costs and also be saved for future editions or charitable endeavours

Phase 2 (Year 2):

- The digital edition will remain free
- Premium print edition: £8-12 per copy (works via a pre-order system)
- The revenue from the premium print edition will be used to cover the printing costs and also be saved for future editions or charitable endeavours

Phase 3 (Year 2+):

- We will explore sponsorships from ethical organisations along with continuing our old revenue model
- A potential subscription model for "archive access for editions" or "premium supporting member benefits" which will enhance the user experience without restricting access. This can mean early edition releases, exclusive topic requests for articles and more (we will brainstorm this when we get there)
- Print an anthology of "best articles" as an annual collector's edition for those who want to buy it as a keepsake or memorabilia

Financial Goal

Year 1: School will cover the initial costs

Year 2: Self-sustaining through print sales and other fundraisingmethods

Year 3+: Revenue-generating to support charitable endeavours and expansion to other CATS schools

To ensure financial transparency and responsible resource utilisation:

- Pre-Approval: The President must have explicit permission from Faculty Advisors (Miss Emma or designated representative) prior to any expenditure exceeding £15
- Budget Justification: All funding requests must have clear rationale, cost-benefit analysis, and demonstration of why it is a necessity
- Financial Reporting: When requested, we must provide a summary of expenditures documenting how funds were used and when. Basically, we will do accounting to ensure that the funds are used pragmatically

---

Article 6: TIMELINE TO FIRST PUBLICATION

Estimated Timeline: 5-6 months from approval (this is really just a rough estimate/plan of what we are going to do but I will hold a meeting with the students I have already recruited to establish this first and foremost before approval is confirmed)

Month 1

- Week 1-2: Team recruitment via word of mouth and connections, assembly or PT group marketing, poster campaign, social media communications and more (might take longer since all of this needs to be planned)
- Week 3-4: Captain appointments, first official team meeting, role training, establish workflow, documents and meeting times and locations

Month 2-3

- Weeks 5-12: Writers will attend the workshop to learn how to properly research and draft articles (ongoing Lead Writer support)
- Media Coordinator will also launch the Instagram account and begin promotional posts from articles to garner attention and build an audience
- Designers will develop the guidelines and style for our brand, templates, and visual identity/brand style

Month 4

- Weeks 13-16: Peer editing, Turnitin checks, AI detection, revisions
- Lead Editor will give feedback and coordinates rewrites to filter out articles

Month 5

- Weeks 17-19: Layout design will be finalised, visual formatting and final editing will take place
- Week 20: Faculty advisor final review and then we will confirm publishing

Month 6

- Week 21-22: Pre-launch marketing (Instagram, posters, email announcements and more)
- Week 23: We will publish Edition 1 of CATS Insights
- Week 24: Post launch engagement and surveys for improvement (feedback collection, analytics and data collection, celebration for the team)

This timeline is an educated estimate based on HIS Insight's experience, but there should be flexibility for exam periods or when some team members may not wish to work during holidays. If delays occur, publication dates may adjust accordingly.

The ultimate goal is to publish one edition within 6 months of starting but might stretch along all the way to a years time due to the steep learning curve. We will hopefully ramp up production but there are no promises yet.

Article 7: MARKETING STRATEGY

The actual strategy is still to be confirmed, but this is how I envision it will be carried out.

Launch Campaign

- Assemblies: Present CATS Insights vision and showcase the elective to the student body to invite student participation (perhaps during House Matters Assemblies or during PT time)
- Poster Campaign: Posters will be put up in common areas, classrooms, and in the library, along with being shared on PT slides
- Instagram Account: Dedicated @catsinsights handle with "coming soon" teasers and other promotional posts
- Email Campaign: Market the elective via email or school communications to students and parents so that parents can encourage their children to participate (we will share a document which shows the merits of joining)

Engagement Throughout Process

- Article Teasers: We will post snippets and infographics from articles pre-publication along with topics that might garner attention
- Writer Spotlights: Feature contributing students so that students can become familiar via familiar faces

- Interactive Content: Polls, quizzes, Q&As related to STEM topics along with student participation so that they can vote on which topics will be chosen

Publishing/Release Methods

- Primary: Email distribution to all students and parents via school communications (perhaps in the Worthgate's Newsletter)
- Secondary: Downloadable PDF on a website or a publishing platform or from the dedicated CATS Insights social media
- Social: Instagram highlights, LinkedIn posts and more (for university admissions audience)
- Print: Pre-order system for physical copies (£8-12/copy) and we will also donate copies to the school library

---

Article 8: ACCESSIBILITY & INCLUSIVITY COMMITMENTS

CATS Insights is committed to ensuring all students can engage with content, regardless of ability. The inspiration for this article actually came from when I was doing some service work "Reading for the Blind", where I would take a book and then read it aloud onto a platform to create an audio version of it. I envision for CATS Insights to use a similar method/platform to allow all ability-range students to be able to read our publication.

Planned Accessibility Features

- Standard PDF: Compatible with screen readers for visually impaired students
- Alt Text: All images include descriptive alt text for accessibility software for devices
- Various other features for various disabilities: Audio versions (from Reading for the Blind platform perhaps) and potentially Braille format if demand exists

---

ARTICLE 9: BENEFITS & STRATEGIC VALUE

For Students: Competitive advantages for university applications

Universities across both the UK and US systems evaluate extracurricular and super-curricular engagement to gauge leadership, teamwork, and genuine intellectual curiosity. In the US, extracurriculars can make up to 30% of an application's weight with admissions officers looking beyond academics to understand the applicant through leadership and experiences. In the UK, Cambridge explicitly states they "expect to see evidence of students' super-curricular activities and wider engagement with their area(s) of academic interest", and Oxford admissions look for intellectually curious students, with

super-curricular engagement showing genuine interest and a desire to explore subjects beyond the classroom syllabus.

Russell Group universities may also pay close attention to evidence of interest and commitment to your chosen field of study, in which they can look for engagement in activities that align with your intended field of study to demonstrate passion and dedication to it.

CATS Insights provides precisely what admissions officers look for across both systems:

Demonstrated Commitment Over Time: 72% of admissions officers prefer students who are consistently involved with one focus rather than a variety of causes and activities that might be related. Oxbridge admissions tutors specifically value depth over breadth, with a few well-chosen super-curriculars being more impressive than a scattered list of various activities. Involvement in CATS Insights over several years demonstrates sustained intellectual interest, persistence and passion.

Authentic and Proactive Initiative and Leadership: Universities increasingly value "pointy" students who focus deeply in one area, showing passion through compiled activities around a theme. For example, I know several graduates from Harrow who got into Cambridge and other Ivy League universities because their application was built solely around one academic field or interest/hobby that they made seem their life's mission to learn more about. One made aviation his entire shtick and got into MIT, but to be fair, he was already obsessed with aircraft since he was a kid, but another stood out more to me since he made his application to an Ivy League (I think Columbia) centred around anthropology; everything he did would be revolved around that interest, and he got in with a scholarship. Here is the real twister, though: he didn't really have an interest in anthropology but rather science, so he switched his course immediately after arriving. The lesson I took from all this was not to fake my interest but rather to look more into how universities seek these "pointy" students, and this is the exact conclusion I have drawn up in this document. Oxbridge looks for super-curricular activities, anything you have done beyond school that relates directly to your subject, and through publication, CATS Insights enables students to demonstrate authentic intellectual curiosity and initiative. Founding or leading the publication exemplifies entrepreneurial vision, strategic organisation, and self-directed leadership. The sort of students universities look for.

Compelling Personal Statement Material/Ideas: Super-curricular activities such as CATS Insights give real experiences to write about in essays, highlighting growth, leadership, problem-solving, intellectual discovery and determination. UK personal statements should utilise super-curricular activities by creating narratives and creating an image/story of yourself showing passion, intellectual curiosity, and readiness for academic study. Published work and editorial challenges provide concrete narratives and material for these stories demonstrating problem-solving, resilience, and intellectual curiosity, which is particularly valuable for Oxbridge interviews where admissions officers want to hear about what excited you and what you learnt from your experiences.

Verifiable Achievement/Proof and Evidence: Unlike self-reported club participation, published articles with contributor names provide independently verifiable evidence of intellectual work and your efforts. Admissions officers can read the actual work produced and gauge your competencies and see all the work you have done. Along with this, any

contributor that wishes for aid in their university applications will be helped with a certificate showing their involvement, an essay on their character and other various means, such as a workshop where they can learn how to leverage their experience with us at CATS Insights for their university applications.

Skill Development:

Universities and employers also look for qualitative skills, including leadership, communication, empathy, organisation, teamwork, and time management, which can be demonstrated through extracurriculars and supercurriculars, as balancing these along with academics and student life is difficult. These skills will help you perform well in university interviews and admissions tests with critical thinking, information absorption, inference-making, and multi-perspective consideration all being evaluated, which are skills that CATS Insights systematically develops through:

- Research methodology and source evaluation (which is fundemental for university study)
- Academic writing and clear communication
- Editorial judgment and quality assessment (critical thinking)
- Project management and deadline coordination (organisational capacity under pressure)
- Diplomatic conflict resolution and teamwork (emotional intelligence and collaborative capabilities)
- Mentorship and collaborative leadership (teamwork skills)

In addition to all of these merits, participating in extracurriculars and supercurriculars helps students discover what they genuinely enjoy, what they excel at, what truly interests them and what doesn't suit them which is important knowledge to have before university so that they can choose which course and field of academic study they want to continue in. Writers can explore whether research and academic writing genuinely interest them, editors discover how capable they are for detail-orientated quality control and designers can test their graphic designing skills and their capacity for creative problem-solving and visual communication.

For The Worthgate School

CATS Insights benefits Worthgate strategically:

- **Unique Offering:** Student-led academic publications remain rare within independent schools and such a unique offering can bring an advantage to The Worthgate School
- **Appealing Opportunity for New Pupils:** Prospective families seeking schools with super-curricular opportunities and academic strength can find tangible evidence of academic culture and student empowerment via the publications
- **Alumni Engagement:** Former contributors maintain connections through the publications, which can allow current pupils to seek guidance or make useful and meaningful connections with them

CATS Insights creates visible and real evidence of student intellectual capacity, proactivity and initiative, also showing there is faculty commitment to supporting student-led innovation and institutional culture valuing proactivity and creative hard work.

Student publications also play a critical role in community building, providing opportunities for students to find purpose and feel connected which is always a key school goal. CATS Insights fosters:

- Cross-year-level collaboration (Year 9s working alongside Year 13s to break typical norms)
- Interdisciplinary engagement (STEM-focused but encourages connections to humanities and social sciences and other fields of academic studies by the other potential publications)
- Shared intellectual identity (contributors can develop a sense of belonging)
- Visible celebration of academic achievement (publication releases can become celebrations of student proactivity and their hard work)

For CATS Global Schools

CATS Insights provides a blueprint for systematic implementation across all CATS institutions, creating a unique network-wide offering via:

- **An established framework that can be easily utilised:** Operations Manual, editorial standards, training slides and quality assurance protocols that are all documented and can easily transfer directly to other schools for easy implementation
- **Inter-school collaboration opportunities:** Joint editions, cross-school article competitions, and shared expert reviews can strengthen school network identity along with building unity amongst the schools' students

Students across CATS schools contributing to a unified publication develop a network-level community, with cross-school exchanges and connections such as this building relationships between institutions. An annual "best of CATS Insights" anthology can showcase collective intellectual achievement, strengthening the CATS brand.

How will we measure our success?

CATS Insight's success can be assessed through:

- Number of active contributors per edition
- Publication frequency and consistency
- Distribution reach (readers)
- University acceptance rates (does it make a tangible impact)
- Revenue generated through print sales (for sustainability)
- Student testimonials about skill development and confidence growth
- Faculty observations

- Prospective family feedback during recruitment (whether we influenced their enrollment decision)
- External recognition (university admissions officers, educational publications, potential awards)

Article 10: SUSTAINABILITY & SUCCESSION

Year 1

- Founder and President (Me) leads all operations with full authority
- Captains develop skills and take ownership of specific functions and aspects of the process
- Document all processes in Operations Manual (created collaboratively throughout the year)

Year 2

- Identify successor from Year 9-12 students demonstrating leadership and commitment to the cause (cult-like commitment)
- The successor will work alongside Founder and President (Me)
- Gradual responsibility handover while the Founder and President remain as an advisor

Year 3+

- The successor will take the role and title “President” and also take authority. The original Founder will remain contactable for guidance
- The cycle will repeat as each President identifies and trains their successor before handing off responsibility, naming the next President whenever they see fit
- The Operations Manual will ensure institutional knowledge is preserved and all the due knowledge and processes can continue to be used for future benefit

In addition, we will create an Operations Manual, and if need be, I will draft a constitution which will contain:

- Detailed role descriptions and workflows
- Editorial style guide and templates
- Marketing playbook and content calendar
- Rules and procedures to follow
- Succession planning checklist

There will likely be more detail than this if needed, but I will see if there is any demand for this at all first and foremost.

Article 11: EXPANSION VISION

Expansion Pathway (Years 2-3)

Phase 1: Successful launch of several editions at Worthgate (proof of concept)
Phase 2: Invite student contributors from other CATS schools (testing collaboration)
Phase 3: Establish dedicated teams at other CATS schools
Phase 4: Create unified "CATS Insights Network" with regional editions and annual anthology

CATS Insights Junior (simplified STEM for younger students and charitable distribution) represents the best version of the publication to be published at other CATS schools first.

Subsequently, if demonstrated demand exists, **CATS Perspectives** (humanities and social sciences and other fields of academic study) and **CATS Advanced Research** (higher level papers and EPQ-esque investigations and articles) can be the next publications to be published at other CATS schools is they maintain identical quality standards and the same operational frameworks.

Note: This is just my ambition for the future and even though I believe that this is very much possible, I understand it would be wise to keep it at the back of my mind initially and see if the idea is feasible at The Worthgate School first.

Article 12: FUTURE CHARITABLE INITIATIVES

Once CATS Insights establishes itself, the initiative will expand its mission for making meaningful and sustainable community impact.

Potential Charitable Programs

- **STEM Workshops:** Visit local schools/community centres to conduct hands-on experiments/lessons based on published articles and hold workshops for students
- **Free Print Editions:** Donate copies to underfunded school libraries and community centres so everyone has access
- **Mentorship Program:** Connect CATS Insights team with younger students from less-privileged backgrounds in a charitable endeavour to share knowledge and the privilege of education

In my opinion, the most efficient pathway for charitable engagement is **CATS Insights Junior (**a simplified STEM publication with content specifically for a younger audience or normal people, just not the highly advanced version). Contributors can gain valuable experience in communication and public engagement by learning to explain complex topics without oversimplification. Meanwhile, underprivileged students or anyone looking for education can access quality STEM education materials they might not otherwise have access to which can potentially spark interests, especially for the youth. This is the most

efficient resource utilisation since we are repurposing intellectual work that has already been produced rather than starting from scratch, which will take much less time.

Article 13: REQUESTED SCHOOL SUPPORT

To launch CATS Insights, we respectfully request:

Financial Support

- £50-100 for first year costs (detailed in Article 5)
- More potential funding if needed due to unforeseen costs arising

School Support

- Faculty Advisor: Miss Emma as primary advisor (or alternative)
- Turnitin Access: Access to Miss Julie's school account for Turnitin
- Facilities: Weekly meeting space for team gatherings and also use of school resources
- Communications: Permission to distribute via school email/communications and permission to use the school name for the article
- Promotional Support: Announcement at assemblies and PT times, permission to put up posters and flyers, permission to run the social media account with the school name and other marketing campaign strategies
- Privileges: Ability to make special requests to the school when the need arises

Future Support

- When ready to expand, share promotional materials with other CATS schools so that we can start expanding (help us make connections and set up branches at other CATS schools)
- Feature CATS Insights in CATS Global Schools newsletters/communications

Any other requests will be made by the President if necessary.

ARTICLE 14: CONCLUSION

CATS Insights is a high impact initiative requiring £50-100 in first-year funding while delivering substantial value by providing supercurricular opportunities for 20-30+ students consistently, enhancing school reputation and a scalable model for future expansion and improvement. This proposal adapts the proven HIS Insights framework while improving on its limitations through systematic improvements that I have made to its fundamental frameworks to create a platform for students to be able to explore their academic interests

while demonstrating their capacity for rigorous academic work which will benefit both their university applications and the school's mission and image.

I am asking The Worthgate School to trust me with the resources and authority to build my initiative. I welcome questions, constructive feedback, and the opportunity to demonstrate the potential of my idea. I now ask for the school to review my proposal and if approved, allocate the requested budget, confirm my requests and allow me to start the process of developing the first edition.

Thank you for reading and considering this proposal. It does mean a lot to me and is greatly appreciated.

Respectfully submitted,

Kyal Sin Ye Yint (Jason)
